## A camera that keeps the heart of photography.

Deconstruction of digital camera. —the starting point and journey of SIGMA fp.

SIGMA has been questioning the genuine value of a digital camera and how can we break down manufacturer's ideas of camera-centric hierarchies and categories.

Deconstruction is our answer after rethinking what is essential to the users. We believe a camera should be more than a tool for fulfilling rational needs of photography making, but enriching life as your inspiration. Therefore, "how can SIGMA be the one to make this happen?"

As the answer to this question, SIGMA set itself to develop a user-oriented digital camera that reflected the idea of "how a camera can be" in a more flexible and true-to-life manner.

A camera that keeps the heart of photography.

As a result, the SIGMA fp is the new form of camera that lets creativity get in. Because SIGMA believes keeping the essence is the key to genuinely realize the idea of giving freedom back to you.

Deconstruction of  
digital camera

## fp's promises

SIGMA fp series cameras are more than a camera you can imagine.

They are born for image creatives to free their imaginations and expressions by leveraging the fully user-oriented concept behind.

The three core identities that the fp series cameras standing for perfectly reflect their promises to people who genuinely love imaging making.

**Pocketable full-frame**  
Small in size, big on quality  
Perfect for carrying anywhere.

As a camera that keeps the very essence of photography, the SIGMA fp is the world's smallest and lightest\* full-frame mirrorless camera. You can take it with you anytime, anywhere—this will build a new relationship between you and a full-frame camera.

**Scalable**  
From vintage lenses to modern gadgets, up to professional movie setup. Creating your own style has never been so easy.

Pair it with the latest lens and accessories, or enjoy a vintage lens using an adapter. Keep it small and casual to take it out for everyday snaps, or build a full-fledged filmmaking setup. Old and new, large and small. Customize your fp just the way you want it, to suit what you want to do.

**Seamless**  
Capturing your best moment.  
Photo or video?  
The choice is yours.

Change shooting modes with just a flip of a switch. The SIGMA fp goes back and forth seamlessly between video and stills, responding straight to how you like to shoot, going beyond the boundaries of style or genre.

A big canvas for big moments

A small camera for a big freedom

NEW

fp L

35 mm full-frame Back-illuminated Bayer sensor  
with approx. 61 effective megapixels  
Contrast detection autofocus + Phase detection autofocus  
Supports USB power supply

fp

35 mm full-frame Back-illuminated Bayer sensor  
with approx. 24.6 effective megapixels  
Contrast autofocus  
The original "World's smallest and lightest full-frame mirrorless"

# 61,043,840 PIXELS

Possible with fp L

**fp L. Makes the leap of 61 megapixels.**

**The highest resolution presented by SIGMA.** New features of fp L

The SIGMA fp L features a Bayer sensor with approximately 61 effective megapixels, higher than any other SIGMA camera before it. In addition to superior rendering, the fp L is capable of creating images that are high-definition and rich in color, thanks to its ultra-high pixel count and SIGMA's experience in developing Foveon sensor cameras, which would inevitably have a ultra-high pixel count due to its structure. Furthermore, the Foveon sensor was also behind the principle that the fp L should have a low-pass filter to reduce moiré to minimum levels for free of color artifacts.

# CROP ZOOM

Possible with fp L

Equipment: 14-24mm F2.8 DG DN | Art 1x zoom Focal length: 19mm Resolution: 9.5K

Equipment: 14-24mm F2.8 DG DN | Art 5x zoom Focal length: Equivalent to 95mm Resolution: FHD

**Higher resolution. Greater freedom.**

**Every shot is your dream shot.** New features of fp L

Features a crop zoom function that works in both the STILL and CINE modes. Thanks to its ample (approximately 61 effective) megapixels, the fp L can record in full HD quality even at its maximum 5x zoom; because this is accomplished simply by cropping with no digital enhancement, the image quality will not suffer. To use it in a more intuitive way, you can pinch to zoom on the LCD touch screen.

# 2 NEW COLOR MODES

Possible with fp L

**POWDER BLUE**

**DUOTONE**

**New colors. New adventures.** **New features of fp L**

Characterized by its fresh blue tones, Powder Blue has a bright and clear feel to it, while Duotone turns the colors of an image into an effective two-color gradient. These two new color modes will give you a greater range and freedom to your still and video image creation with the fp series.

\*Scheduled to be available on SIGMA fp via firmware update scheduled at a later date.

# 15 COLOR MODES

Possible with fp L

15 color modes.

Features SIGMA's unique color modes such as "Teal and Orange" which creates high contrast between orange colors, which are found in human skin tones, and teals (cyan blue), which are their complement for visuals that are highly vibrant and deeply dramatic. The "COLOR" button gives a quick access to the Color Mode menu, allowing for more freedom and a wide range of expressions.

# MULTI-ASPECT

Possible with fp L

## See outside the frames. Diverse aspect ratios.

In STILL mode, you have seven aspect ratios to choose from. You can either choose one that suits your mood and preference, or try out one that you don't normally use to discover a new framing and style. The SIGMA fp series' diverse aspect ratio will bring you possibilities to experience something that may change the way you see things.

## ● See what your fp sees.

ELECTRONIC VIEWFINDER EVF-11

NEW

An external electronic viewfinder (optional) designed exclusively for use with the SIGMA fp series. With this high-resolution, high-luminance viewfinder with a 0.5 inch, 3.68 M dots OLED panel, you will feel immersed in your photography experience more deeply than ever. SIGMA's attention to detail is evident in the 90° upward

tilting mechanism, expandability with external accessories, and highly functional user interface, which is designed to ensure convenience and comfort during use.

\*Scheduled to be available on SIGMA fp via firmware update scheduled at a later date.

## ● Share your work. Share your world. **New features of fp L**

Saving & Loading Settings are easier than ever

With the fp series, you can now save a custom camera setting. Saved settings can be kept as QR code image data, so you can load many patterns of settings very quickly. This allows for a new, fun way for users to share custom settings they recommend with one another by exchanging QR codes with other users or sharing them on social media. \*QR Code is a registered trademark of Denso Wave Inc. \*Scheduled to be available on SIGMA fp via firmware update scheduled at a later date.

## ● Unlimited power supply. **New features of fp L**

Long hours of worry-free USB-C cable power supply

The SIGMA fp L supports USB charging while the camera is on. You can shoot without interruption while charging the camera using a mobile battery, even outdoors or where you have no access to a power outlet. When using it as a webcam, just connect the fp L to a PC via USB and it works as an audio and video input device while getting its power supply from the PC. This means that you can use it for long hours without having to worry about the battery dying on you.

\*When connecting to a PC, it depends on the power supply capacity of the PC.

## ● Never miss your moment. **New features of fp L**

Hybrid Autofocus

In addition to high-precision contrast AF, the SIGMA fp L features fast image area phase-detection AF. This hybrid AF allows users to enjoy smooth autofocus that is high-precision, fast, and excellent at tracking a moving subject, whether they are shooting stills or video.

## ● Abundant of choices for every occasion. **New features of fp L**

L-Mount lenses

The SIGMA fp series uses the L-Mount\*, characterized by a short flange focal length, large diameter, and superior durability. For interchangeable lenses, in addition to the wide-ranging choice of SIGMA lenses, other manufacturers' lenses can also be an option through the L-Mount Alliance with Leica Camera AG and Panasonic Corporation. With the SIGMA MOUNT CONVERTER MC-21, SIGMA SA mount and SIGMA's CANON EF mount lenses can be used, making the best out of one's lens investment.

\*The L-Mount Trademark is a registered Trademark of Leica Camera AG.

## ● Film like a pro. **New features of fp L**

Supporting 12bit CinemaDNG recording

For raw video data, the SIGMA fp series supports 12-bit CinemaDNG external recording. With 4K UHD/24fps recording, it produces video data that can be used even in filmmaking. It also supports Blackmagic RAW and ProRes RAW over HDMI recording, so you can choose one according to your workflow. For the operation system, the SIGMA fp series features a dedicated interface that supports commonly used cinema cameras, which means it can be taken straight to video production settings.

Your adventures with  
SIGMA fp L has just started
